

FISITA Circular number 026  
Circulation Group      Member Societies

27 July 2016

Dear all,

### **Work Experience Programme**

Earlier in the year we announced plans for a Work Experience Programme as part of our objective to support the education, training and international experience of students and young engineers. Today we have launched a dedicated section on [fisita.com](http://fisita.com) for this exciting initiative, which can be accessed [here](#).

I am delighted to announce that our first Work Experience placements with Bosch, Applus+ IDIADA and Test World Oy are now open for applications – details are published on [fisita.com](http://fisita.com) [here](#). We are also in discussions with a number of our Honorary Committee members and will be launching additional placements in the coming months. These vital placements will be offered, by application, to students at all of our Member Societies and as the Programme matures its objective is to channel fresh talent to the industry and increase new student memberships. As part of the process, we ask that our Member Societies promote the initiative as an exclusive benefit to their members.

As well as being published on [fisita.com](http://fisita.com), details of these opportunities are attached. Students can also sign up to our email alerts [here](#) so they will be the first to know about the placements. Please can we kindly ask that you share this advert and/or its content with your student members via:

- Email to all student members
- Publish details on your website - news items/blog posts
- Share the link on your social media pages
- Share information in your newsletters

As soon as we receive information on additional opportunities, we will send on this information to you in a standard format that will allow you to share the information easily. If you would like any more information on this please feel free to contact me or Hayley Millar, FISITA's Education Officer, at [h.millar@fisita.com](mailto:h.millar@fisita.com).

All the best,

Chris Mason
